

BRIDGE PORTAL

Bridge Portal provides an easy-to-use and consistent interface for all users of your IT applications, both internal and external. Bridge Portal can quickly and easily deploy multiple portals that are branded and customized for different users, products and function while maintaining a consistent user experience. This helps insulate users from the impact of core system changes by bridging both legacy and modern systems. Bridge Portal provides users with a consolidated view of the transactions they are working on, the documents they need access to, and the notes and tasks assigned to them. Bridge Portal's tools can create workflows to support new business submission, quote presentation, endorsements, renewals, document review, invoice payment, audit declarations and claims reporting.

Bridge Portal also includes SmartView, Oceanwide's data analytics and visualization technology that can retrieve and present data from any source in a variety of compelling ways, using comparative charts, highlighting exceptions with geospatial mapping tools to isolate aggregation.

Bridge Portal allows users to personalize their experience, using intuitive interactive tools to streamline their workflow and improve efficiencies. These features combine to help make you the easiest carrier to work with and the preferred choice for agents, brokers, clients and internal underwriters.

Bridge Portal features Smart Configuration – a key feature in all modules of Bridge. Smart Configuration allows Bridge Portal to be implemented, managed and updated completely through screen-based tools, without the need for any programming or scripting. When configuring products and portals, companies can rely on their own internal IT resources, business users and subject matter experts to act independently without relying on vendors or third party systems integrators, minimizing external support costs.

<p>BRIDGE PORTAL DELIVERS:</p>	<p>Universal Access Point</p> <ul style="list-style-type: none"> ▪ Multiple Branded URLs ▪ Personalized Welcome Screens ▪ Role-based Security Model ▪ Centralized or Distributed User Management ▪ Single Sign-on Capabilities to deep-link to external systems ▪ Multi-lingual, multi-cultural and multi-currency 	<p>Dashboards, Work Queues & Analytics</p> <ul style="list-style-type: none"> ▪ Current Transaction Lists ▪ Account & Policy Summary Views ▪ Deep Analytics Capabilities ▪ Internal and External Data Sources ▪ Personalized Views for Individual Users
